

BP&R Engineering Inc. and BP&R Construction Inc. have partnered with Soils & Structures for more than twenty five years. Over that time frame the scope of their structural and geotechnical support of BP&R has crossed every path of industrial consulting and design engineering. The range of projects we provide to clients varies from several thousand dollars to \$95 million dollars. Big or small, Soils & Structures' Structural Engineering, Geotechnical Engineering, Construction Testing, and Steel Inspection support is second to none. Put reasonable cost and high quality on top of strict schedule adherence and it becomes obvious that Soils and Structures is our first choice.

Mark Peplinski P.E.
