MULTIVISTA KNOWS TECH

hen it comes to providing visual documentation software and services to the construction and facilities management industries, Multivista has the right mix of technology solutions and local "boots on the ground" customer support to get the job done.

Founded in 2003, the company recently surpassed 1.75 billion-sq.ft., of documented construction projects across every main segment within the industry.

Multivista's growth strategy is one to take note of and the past year has been a big one for this technology pioneer.

"Multivista is already a leader when it comes to visual construction documentation services. Still, the company continues to look for new ways to grow the business globally, while testing the latest technologies and creating user-friendly programs for their clients."

- Constructech editors

In addition to the grand opening of five new North American franchise locations, Multivista also launched its first Central American franchise location.

With these newest additions, the company now operates and has local support teams servicing more than 60 major metropolitan areas across the United States, Canada, the United Kingdom, and most recently Panama.

Aside from its continued global market expansion, the company announced two major service offerings within the past year. The Multivista BIM Integration program now links their client's visual documentation directly to the BIM model in Autodesk Revit, Navisworks, and BIM 360 Glue/Field software. This integration enables construction and facilities management teams to seamlessly validate and compare modelled conditions with actual conditions within BIM.

Also launched recently was Multivista's Project Implementation Management program. This solution includes personalized training,

customization, and ongoing support from Multivista specialists to ensure the user gains the greatest value from the technology throughout the building's lifecycle.

While Multivista's research and development team continually seeks out new technologies, its hands-on support teams provide customers with the most user-friendly solutions available on the market: The combination of the two has led the company to carve out its niche in the construction industry.

SECTOR:

Commercial Residential

PRODUCT OFFERINGS:

- Visual Construction
 Documentation
- Collaboration
- Mobile
- Project Management

PROS:

- Local teams provide full-service client support
- Expanded integration and implementation programs
- Continual focus on R&D

EXPECTATIONS:

- Continue to add and support new franchises globally
- Broadened suite of technology and services
- Exceed the 2 billion, sq.ft. mark on awarded contracts
