

New Trends in Sustainability SHAPE COMMERCIAL BUILDING DESIGN

Green building is here to stay, as evidenced time and again in surveys reporting trends among architects and builders, manufacturers and homebuyers.

As eco-friendly buildings have transitioned from trend to mainstay, this niche of commercial design has taken on trends of its own.

An analysis in Building Design + Construction points to several green commercial building trends that will continue to shape the landscape in 2018 and beyond.

Each trend indicates that while green building is a priority, the way that looks will continue to change:

Space design & planning

Greater demand for flexible spaces.

Wellness

Focus on how people experience physical environments.

Resiliency

Built-in resilience for buildings in the wake of climate change.

Innovation

Smart buildings that reimagine typical design and construction.

Certifications

Credibility becomes more necessary than ever.

Human factors

Corporate social responsibility ranks high in priority.

Deceuninck is as committed to responding to trends as we are to shaping them. We're excited to see the ways these trends take form as the year progresses, and are even more excited to help our partners turn them into reality.

deceuninck

COMMERCIAL

Deceuninck Commercial is a unique performance-based alliance of window and door manufacturers that commands both precision capabilities and commercial project expertise. The group leverages their commercial market business model behind the power of Deceuninck, a global leader in PVC window and door development.
