

# Project Profile:

## COLLABORATING TO BUILD A BETTER CUSTOM HOME

### Westeck and Deceuninck engineer Passive House solutions

**WHO:**

Deceuninck North America  
Westeck Windows and Doors

**WHAT:**

Westeck, a North American manufacturer that produces doors, patio openings and windows for the custom home market, is known for its designer friendly products that are a popular choice for modern and contemporary-styled projects. Westeck also excels by offering rich color capabilities across all product lines.

**WHY:**

Deceuninck's Revolution XL™ Tilt & Turn Passive House Edition features high thermal and acoustical performance as well as compression seal technology, which delivers exceptional resistance to air and water infiltration. The Revolution XL™ Tilt and Turn system is also suitable for commercial and high-end residential applications.

As the company looked to future trends, it needed a supplier that could deliver a

Passive House certified window. Deceuninck's Revolution XL™ Tilt & Turn Passive House Edition window with its high thermal and structural performance, innovative designs, and array of color options was a perfect fit.

In addition to the exceptional systems, Westeck chose Deceuninck for its expertise and extensive capabilities.

"Deceuninck was able to look toward future trends and working collaboratively with them, our goals became their goals," said Neal Turner, general manager, Westeck Windows and Doors. "Deceuninck introduced and connected our team with their key personnel and promoted accountability during development and implementation. They are a great group of people and very enjoyable to work with, making the whole process even better."
