Re: Recommendation for Arizona Corporate Builders (ACB)

To Whom It May Concern:

Arizona Corporate Builders has recently completed the pre-engineered buildings at the Tony Neilssen Equestrian Center Expansion at WestWorld in Scottsdale, Arizona as a subcontractor to Howard S. Wright.

Their scope of work included both ends of the pre-engineered building spectrum. ACB performed a challenging renovation upgrade to the existing 100,000 square foot Equidome pre-engineered structure. The entire building was structurally upgraded and a clerestory structure added at the roof peak. The new pre-engineered building scope of work included a 25,000 square foot paddock, a 40,000 square foot exhibit space and a 115,000 square foot event space. The large event space is a column free space with a clear span of approximately 285 feet and is approximately 410 feet long. All of the new buildings were attached to the existing Equidome via walkways and large overhead doors.

Arizona Corporate Builder's performance on this project has been exemplary. From day one, Dan Barnett and his team have been fully engaged in the project. Their initial engineering analysis and alternatives were invaluable in our preconstruction and budgeting efforts. They simply rolled up their sleeves and went to work resolving any design issues or conflicts - truly a team player effort. ACB delivered and erected the structures exactly as promised. Delivery dates were all met from the fabrication plant and building erection was on schedule. The job site safety their crews implemented during the entire project and in particular during some of the extremely challenging erection efforts were a model effort, all very well planned and executed.

We were very pleased with the entire project effort and results from Arizona Corporate Builders. We highly recommend them for any type of pre-engineered building program - large or small - new build or renovation.

If you should have any questions, please do not hesitate to contact me at zastrowd@hswc.com or my direct phone line is (602) 515-0736.

Tempe, AZ 85281

To Whom It May Concern:

Since purchasing our building in late 2009 in Phoenix,AZ, Arizona Corporate Builders have tendered bids for us as a General Contractor. We have had numerous improvements completed without a problem. The scope of the projects were as follows:

- General painting
- Installation of extended garage doors
- Filling and paving truck level driveways
- Electrical work
- Roof insulation
- 7 - A/C units installed

They performed their responsibilities in a timely manner with a great degree of professionalism. Our specifications were for turnkey projects, and this was provided.

During the project periods, we were updated with verbal and email progress reports. Arizona Corporate Builders always satisfied us by completing work within the given time frame.

I am pleased to refer ACB as a valuable supplier and asset to your organization. Please feel free to contact me for any question you might have.

Sincerely,

Ron Chappell,
President

Ref.: Letter of Recommendation

To Whom It Concern,

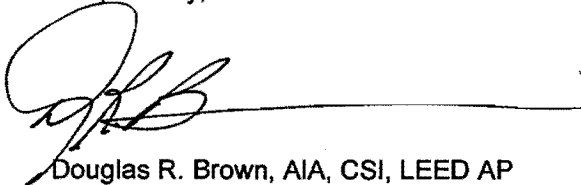

We highly recommend Dan Barnett and Arizona Corporate Builders LLC to anyone in the market for a pre-engineered structure.

Architekton has worked with Dan on numerous projects over the years and has always been impressed with the level of service we have received. Dan has always acted as a collaborative partner in our design process when the use of pre-engineered buildings was needed. He seems to really enjoy "pushing the envelope" of the pre-engineer building industry. Collectively we have been able to achieve truly unique solutions that have met our client's goals and provided the cost savings needed to make the project work.

Dan and his company's high level of service start in the conceptual design phase and continue through to opening day of the facility. Although we have never needed his services after opening day of a facility, we have no doubt he would be there to assist if any post construction issues would arise.

Again, we highly recommend Dan and his company to anyone in need of a pre-engineered structure.

Respectfully,
