Subject: Project #1828 Completion

Jim,

We have received the reports for this project and find them acceptable. We did make one correction that you may want to make in your file (on page 1 of section 2, the roof ladder height from ground to base of ladder should be in inches, not feet).

Also, I had promised to send a glowing review for the crew:

Our experience this time was so much better than the first 2 times we had crews out from your company. They arrived with all of the needed materials and did not spend the first few days of the job standing around waiting.

When we had to get a different plug for one of the pipes, they were able to determine what was needed and get it here by the next morning. The work was completed in half the time scheduled and the tank was returned to full service days ahead of schedule. We previously had a crew here twice as long and they were doing only part of the scope that this crew completed.

We received the inspection reports about a week after the on-site work was completed, which is a record for us. Previously it took several weeks to receive our reports and we had one occasion where we received an incomplete inspection.

Everyone on the crew was very friendly and we enjoyed having them here.

Elaine Brewer
