

CANYON

BUILDING & DESIGN

Mr. Brad Avery,

Canyon Building and Design, since 1999, has built a reputation for providing smart, quality construction that compliments the beauty of the Sonoran desert. From historic renovations to large-scale commercial development, our commitment to innovative, environmentally conscious craftsmanship is evident in every project.

We specialize in retail and commercial new construction and historic remodel projects ranging from single store front build outs to full scale big-box developments. Our team is also experienced in PV solar array installations, and other green building technologies and LEED Certification building standards.

Canyon Building and Design has been using The Blue Book Network to post projects and upload drawings and documents for bidding for several years now. Their Invitation to Bid system is very easy to use and is as private or as public as we want it to be. We have uploaded our private vendor database which The Blue Book helps us maintain and update critical content to contact our subcontractors and suppliers as needed. We also use their online database to make direct contact with new specialty contractors and suppliers.

We have a standing order for 3 copies of the Arizona hardbound directory to keep on hand for quick reference. We also receive copies of the Los Angeles, San Francisco, Central Valley and San Diego directories for the work we do in California. Recently, we requested a hard copy book for the Washington DC and Portland OR areas to begin prequalifying and contacting potential project team members for a market where we have never worked.

We have found that no matter what we need, The Blue Book has solutions to help us better manage our projects, find and hire the right project team, and simply work more efficiently in this very competitive marketplace.

And they offer all these services to us for FREE. We would highly recommend these services!!

Sincerely,

Scott Laughery

Canyon Building and Design
