

Beacon Housing Authority

The Beacon Housing Authority (BHA) staff, along with myself, had a great experience with Malcarne Contracting. The large energy retrofit project included solar, insulation, replacement of our HVAC equipment and installation of energy efficient lighting. Malcarne Performed these energy efficiency measures on our Forrestal Heights property, which includes a 9-story high-rise building, a low-rise family section and a low-rise senior section. They also performed this same work at Hamilton Fish Plaza, another multifamily residential building we have. Malcarne Contracting helped us from conception through completion, with creating the list of energy efficient measure to seeing it through completion. Throughout the process, their professional and competence made me feel comfortable working with them. Their workmanship was of the highest caliber and they were always available when I needed them or had questions. They are a great company to work with!
