

## VA HOSPITAL - Oklahoma City, OK

In response to a global pandemic, thousands of United States hospitals found themselves in need of additional treatment and administrative space. Satellite Shelters was called upon by the Oklahoma City Veterans Hospital to provide additional office space in the form of 2 double wide mobile office trailers. The use of mobile offices freed up additional clinic space within the hospital.

The two mobile offices were positioned in a tight space directly outside the hospital. A custom built wooden ADA compliant ramp provided ease of access to both building entrances. Additionally, a smaller mobile office trailer was delivered and utilized as a check in station for the pharmacy. With space solutions from Satellite Shelters, the Oklahoma City Veterans Hospital was able to safely maintain efficient operations and quality care of their patients.

*"Each person on the site was over the top extremely professional and eager to be a part of the solution rather than the problem."*

- John M. Wilson, CCR Oklahoma City Veterans Hospital
