

Attached is a video stream from the security system we installed in Dallas last year after the string of burglaries. The new system last night worked just as advertised and resulted in 4 people being arrested for theft. The system has an infrared perimeter cameras that when the infrared is broken sends this 15 second video stream to the security company that monitors it 24/7 and if they determine if the cops need to be contacted. They did and dispatched the police and the ***cops caught the 4 guys in the act and arrested them.***

Here is a testimonial from a branch that was hit 5 times a year ago with a standard video monitoring system with no arrests. The contact information is below if anyone is interested in contacting them.
