To Whom It May Concern:

This is an unsolicited letter of recommendation for Geofill Construction. The University of Texas Marine Science Institute is just completing the repairs and renovation with Geofill to our student housing that was severely damaged by hurricane Harvey. The apartments were constructed in the late 70's and had substantial spalling that also needed to be repaired as well as complete electric rewire and new plumbing. As with any project of this magnitude we ran into unexpected issues not covered in the scope of renovation. Geofill met each challenge with a timely 'can do' solution. They coordinated sequence of repairs and delivery of materials perfectly. Geofill paid attention to detail on both small and large elements of the project. They kept a clean and organized work site. Their team was prepared for each weekly construction meeting and anticipated questions that might come up with ready responses for both the architect and The University Project Management Construction Services division. Geofill's attitude by each and every member of their team throughout the project made this a pleasant experience for those of us already stressed by recovery from this significant storm. The only impacts to the budget were additions by the owner, otherwise they delivered on time and within budget.

The University of Texas Marine Science Institute sustained over forty million dollars in damage from hurricane Harvey. We have worked with multiple contractors during our recovery and without a doubt Geofill was far and away the best experience. I recommend them without reservation.

Sincerely,

A handwritten signature in blue ink that reads "Georgia Neblett".

Georgia Neblett
Director of External Affairs
The University of Texas Marine Science Institute
