

March 2020

To whom it may concern:

Zeman Homes is proud to recommend TechnoIP Solutions as a trusted contractor for any IT related projects, big or small, due to their extraordinary diligence, commitment and professionalism in all aspects of any project they have performed for us. TechnoIP has shown to be very knowledgeable whenever we've required help at any technical level, including the design and execution aspects of the project.

They have most recently worked for us on the enhancement and expansion of our outdoor wireless internet solution, for our residents, at The Waves RV Resort located in Naples, Florida. They assessed the existing situation and problems, measured and designed the improvements required, and effectively expanded the coverage throughout the park by adding more than 25 new 20 FT high towers with mesh antennas, thereby doubling the capacity of our wireless network. We now have a fully meshed network, properly back-hauling traffic, and expandable to accommodate additional devices and bandwidth without needing a major overhaul of the current infrastructure.

We can always count on their technical and support staff for future follow-up and support. They do not leave a project after it is "completed". They leave a project after it is **completed**. Because of their commitment to being thorough, TechnoIP is a preferred vendor for our projects in South Florida.

If additional follow-up is requested, TechnoIP is permitted to give my contact information to an interested customer.
