Mercy Medical Center Updates
Tile Showers in Patient Bathrooms

▲ Patient showers & bathrooms get a much needed renovation. Damaged tile & grout were repaired and permanently sealed.

The Problem

Yellow and green tile showers in patient bathrooms looked fine when the hospital was built in 1970, but are not in keeping with current renovation upgrades. Tom Meyer, Mercy's Director of Plant Engineering needed a cost effective upgrade process. After seeing their ad in Inside ASHE magazine, he contacted Miracle Method Surface Refinishing.

The Miracle Method Solution

Miracle Method proposed refinishing the existing tile in Natural Accents[®] Oyster White. Natural Accents is an excellent solution because it creates an attractive new surface, permanently seals the grout, is easier to clean and prevents the buildup of mold and mildew.

The Process

The surfaces were cleaned and the fixtures were masked. The tile was primed, then refinishing in Natural Accents and clear coated to create a water resistant surface. Each bathroom was returned to service in two days.

The Result

The project was finished on time and on budget. According to Meyer, "Everyone on the hospital staff was very impressed and pleased with the final result. The Miracle Method technicians were professional and their refinishing process saved us money over replacement. We will be having them back to do more."
