Re: Florida Polytechnic University – Mechanical Systems
ABC Excellence in Construction Awards Nomination

Dear Mike:

The Florida Polytechnic University is happy to endorse your nomination for the Excellence in Construction Award. Tappouni Mechanical worked with the University, Construction Manager and Mechanical Engineers to produce a full system of chilled water (CHW) production and distribution, and completed mechanical systems for all five buildings currently on the Florida Poly campus.

The system has a pair of 600-ton “state of the art” magnetic rotary chillers and supplies CHW for: the 161,000 GSF Innovation, Science and Technology Building - Classrooms, Laboratories and Offices; the 99,000 GSF Student Housing 1 - 64 four-bedroom / two-bath apartments and Student Support Space; the 20,000 GSF Wellness Center – Cafeteria, Bookstore, Student Health and Fitness Center; the 5,000 GSF Technology Admissions Center – Classroom and Offices; and the 5,000 GSF Campus Control Center – Network Operations Center, Campus Data Center and CHW Production. Tappouni Mechanical provided the installation for all of the systems, distribution and controls.

Thanks for your efforts on the University’s behalf.
