RE: Chevron Flare Gas Recovery Projects

Dear Sean:

As you know, Mustang Engineers and Constructors, L.P. served as the Engineering, Procurement and Construction Management Contractor for the recent Flare Gas Recovery Projects at Chevron's El Segundo Refinery. I wanted to take this opportunity to thank Metal Supply, Inc. ('MSI'), and you personally for the outstanding work you did for us on these projects. As a result of your efforts and the efforts of others, one of these projects was awarded the Western Council of Construction Consumers (WCCC) Distinguished Project Award for 2009.

MSI fabricated over 800 tons of steel for these projects with near zero fabricator errors. Our Construction Management Team told me on several occasions this was the best steel design and fabrication effort they had ever worked on. Coming from a team that has an average of over 30 years experience in the business, this is the ultimate compliment in my mind. All this was accomplished with some very aggressive schedule requirements; you were able to meet all our delivery needs.

Metal Supply, Inc. can be very proud of your effort on these projects and Mustang looks forward to working with you again in the near future.

Sincerely,

Tommy T. Bennett

Project Manager  
Mustang Engineers and Constructors, L.P.
