To Whom It May Concern,

Cyrex Glass is a partner that ARCO/Murray has been working with for the past 2 years on the new Commercial construction project located at 560 Spring Park Center Blvd, Spring, TX and other projects throughout Texas. This project is a new 65,000 square foot multi story golf range on an 11 acre site. Cyrex is performing all glass scope of work for this job and has been an extremely valuable partner from the beginning.

This specific project is an exceptionally challenging job due to a variety of obstacles involved in the construction. The first is that the schedule for the project is shortened to accelerate the opening of the facility, requiring quick work and no room for error. Cyrex has supported our job with a very talented and large crew that has worked long overtime hours in order to keep pace with the schedule. Also, due to the nature of the TopGolf facility and its focus on technology, the building is a unique and challenging build. The owner has very specific requirements for details and the facility is one of a kind, but Cyrex has risen to the challenged by understanding the drawings, asking valuable questions to the team, and continuing to learn while on the job. The office staff is sure to understand the full scope of the work and how to approach each task, while the field staff diligently checks their work to ensure that all trades are complete per the specifications. Finally, the biggest challenge that has been faced on our project is the frequent owner driven changes that have come up on our project. Each time there is a change Cyrex has stepped up to identify what has been adjusted and how that relates to what has been installed in the field.

One of the most important attributes that has been show is Cyrex's team oriented attitude on the job from the start to finish. Working with contractors that have the goal of completing a project on time is something that is invaluable. I recommend working with Roy and his team and would be happy to accept any further questions.

Sincerely,
