To whom it may concern:

Re: Optima 68th St / Camelback Mixed Use Condo Project

I am writing this letter to thank Adkins Cabling for delivering a project that reflects the vision and quality Optima Customers have come to expect. This correspondence will also serve as a reference point for projects similar to Optima Sonoran 68th Street / Camelback.

Adkins Cabling LLC was instrumental in the design and construction of the high speed infrastructure which is supporting the delivery of voice /data / HD TV to 210 living spaces carefully defined in a 320,276 sq ft ecofriendly structure. In addition to the living spaces, the infrastructure was design to support technologies that will aid the tenants use in a modern cutting edge amenity space and yet allowing those to stay connected to the world that depends on them.

As a result of working with Adkins Cabling and their lead foreman Travis Vertnik for more than a year, I would highly recommend this team to anyone in my position who is responsible for very detailed design build product with high end finished products.

Respectfully,

Karl Schneider | Senior Superintendent
