Recommendation For:

Heath Steel  
P.O. Box 473  
141 Racquette Drive  
Fort Collins, CO 80522

To whom it may concern,

I have worked with Heath Steel on projects for several clients for the installation of Pre-Engineered Metal Buildings at Gas Plants and Compressor Stations in Colorado. I am writing this letter to note the excellent performance that Heath has done in the projects we have worked with them on.

Specifically, I have worked with them as a Structural Engineer and as a Project Manager on Pre-Engineered metal buildings for housing process equipment, compressors, and maintenance buildings which have an office and a garage for maintenance. Heath has helped me integrate Electrical, HVAC, Insulation, and Crane service under their direction and responsibility. I have consistently been impressed with their focus and dedication on schedule. Their attention to detail has expedited drawing reviews and helped us keep to schedules that have consistently been aggressive for the work that we have done together. The quality and speed at which they turn around high quality submittals has helped keep our projects on schedule during permitting and pre-construction coordination.

One way that Heath has really set their firm apart from their competition in my mind is their responsiveness and collaborative attitude during construction. When issues have arisen they have taken a substantially proactive approach with their on-site and officer personnel to research the issue and propose a mutually acceptable resolution.

I enthusiastically recommend Heath as partner for the building portion of heavy construction projects. If you need any additional information regarding their performance, please feel free to call me at 303.565.5569.

Sincerely,

A handwritten signature in blue ink that reads 'Drew Mathies'.

Drew Mathies, P.E.  
Project Manager
