★★★★★ michael is a great person to work with - his job-site manner is congenial and careful, and he completed our **spray foam** job in a timely manner with no haggling about price. i am remodeling a home in east austin that has now gone from run-down to efficient & weather proofed. **spray foam** is a must for our central **texas** weather and creatures - the added benefit of this **foam** is that it has a built-in fire retardant, which removes a step the city of austin requires of many other **spray foam** products. i would recommend investofoam to other builders.

★★★★★ The results have exceeded my expectations. The **spray foam insulation** coupled with a super-efficient mini-split air conditioner is a winning combination for our super-efficient home that is currently under construction. We installed the mini-split air conditioner soon after the application of **spray foam insulation** and before the installation of drywall. The entire two-story home is cooled from corner to corner, upstairs and downstairs, with no hot spots. The **spray foam insulation** performs as advertised. I highly recommend **spray foam insulation** for new construction.

★★★★★ Fast and careful. Added instant improvement in both heat & cooling. Attic is now 50 deg. cooler in hot part of the day. Easy to cool home in much less time with less power. With almost no heat or cooling house has small excursions due to outside variations. Will payback in a few yrs. - faster as prices for energy rise.
